Hiring Committee
Judicial Information Systems
189 Harry S Truman Parkway
Annapolis, MD 21401

Dear Hiring Committee,

I am writing to express my interest in the Program Manager, Artificial Intelligence position (AI Manager). As an attorney, technologist, and manager at the Maryland Judiciary's Thurgood Marshall State Law Library, I have worked toward the thoughtful integration of technology into legal information and public services. As my experience and skillset demonstrate, I am well suited to the demands and opportunities of this position.

Since September 2017, as Head of Web Content and Services, I have overseen the [People's Law Library of Maryland](#), a legal information website serving self-represented litigants. Along with my small team, I am responsible for all aspects of the site's technology infrastructure, content, and features. During my tenure, I led a full website redesign that doubled annual user traffic and increased digital reference interactions by 65%. In addition to my project management responsibilities, I provide research services to appellate justices, judges, and their staff. Complicated legislative history projects using print and digital resources are my favorite challenges.

Information seeking behaviors are rapidly evolving. As part of the library's leadership team, much of my current work involves strategic planning to anticipate and satisfy our stakeholders' needs. Areas ripe for innovation include information architecture, AI mediated user experiences, and new knowledge management systems. Advances in AI systems have allowed my team to build custom software solutions to accomplish the same tasks more quickly and more comprehensively. For example, we have "vibe coded" a way to monitor statutory changes that directly affect People's Law articles. As a unit of state government, the law library has limited resources, so great care is required to secure the best return on investment. As AI Manager I would apply project management principles to evaluate existing tools and workflows to create tools that augment and enhance the work of all Judiciary staff.

My contributions to the Judiciary extend beyond the law library. I serve as a member of the Maryland Judiciary Artificial Intelligence Governance Subcommittee, which promulgates employee use policies, manages AI technology pilots, and remains abreast of the rapidly evolving landscape. Outside Maryland's Courts, I am the co-chair of the Maryland State Bar Association's AI Task Force. The AI Task Force has published guidance on ethics, sample law firm policies, and a certification course on AI for lawyers. My experience evaluating emerging technologies and encouraging responsible governance frameworks would be an asset to the JIS project team.

Beyond project leadership, I am an active voice in the national legal technology community. My article "*Generative AI & Legal Research: A Mismatch?*" for *AALL Spectrum* called for a focus on practical applications of AI and cautioned against unguarded optimism. I have presented annually at the Maryland State Bar Association's Legal Summit, the American Bar Association's Building Access to Justice For All Forum, and the American Association of Law Librarians Annual Conference. My experience developing AI education programs for diverse audiences demonstrates my ability to translate complex technologies into accessible, practical guidance for legal professionals.

I would be honored to bring my skills and experience to the AI Program team. I am enthusiastic about the Judiciary's forward-looking approach and would welcome the opportunity to lead the JIS AI portfolio. Thank you for considering my application. I look forward to the opportunity to discuss how my skills and experience can advance the Judiciary's mission to bring provide fair, efficient and effective justice for all.

Sincerely,

C. L. Sampson
